

LOCATION:

Putnam, CT

CLIENT:

Day Kimball Hospital

PROJECT TYPE:

Expansion of Existing Site

PROJECT SUMMARY:

- Transportation Planning
- Master Planning

Day Kimball Hospital, in Putnam CT, is currently undergoing a redesign and expansion. The Hospital is increasing the capacity of several of its departments. In addition to the facilities expansion, a number of on-site improvements are being made, related to on-site circulation, access, and parking. Traffic Solutions is working with the Downes Construction Company and the SLAM collaborative to address the transportation issues associated with the current and future conditions.

Traffic Solutions undertook a comprehensive transportation study to identify on-site challenges related to parking demand, regulations, management, vehicular circulation, access, and pedestrian connections. A number of conceptual plans were developed that addressed the current on-site challenges. Additionally, the architect's plans were reviewed and revised to ensure that the designed transportation system meets the future needs of the hospital in a safe and efficient manner.
