

LOCATION:

Somerville, MA

CLIENT:

Nstar

PROJECT TYPE:

Traffic Management Plans

PROJECT SUMMARY:

- Transportation Planning

Traffic Solutions was hired by NSTAR to create traffic management plans for their infrastructure improvements along Somerville Avenue. Traffic Solutions worked on an extremely tight deadline with City Officials to identify traffic patterns during two phases. Phase I included providing traffic management plans for the test pits along the roadway. Phase II included providing traffic management plans for construction.

Working closely with City Officials and NStar representatives, Traffic Solutions was able to expeditiously provide plans that allowed NStar's contractors to proceed with work at a pace and location that was acceptable to the City. Due to its location, the area is heavily used by pedestrians, therefore, the final plans included vehicular re-routing and pedestrians accommodations during the construction.
