

LOCATION:

Watertown, MA

CLIENT:

Town of Watertown
Department of Public Works

PROJECT TYPE:

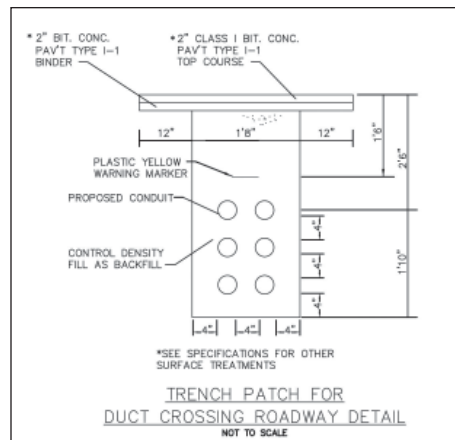

Communications Design

PROJECT SUMMARY:

- Communications Interconnections
- Bid Phase Services

Traffic Solutions was retained by the Town of Watertown to design a multi-conduit installation along Acton Street, expanding underground utility and emergency connections towards the eventual completion of a town-wide communications grid. Traffic Solutions designed the half mile long conduit segment from Howard Street to the rear of the newly constructed police station, minimizing impacts to the roadway, sidewalks, and abutting properties.

Traffic Solutions assembled the bid package within the guidelines of Massachusetts General Law. Traffic Solutions coordinated the advertising, bidding and awarding process for the Town and oversaw the successful construction of the conduit.
